

OVENS & INCUBATORS

Labwit range of laboratory incubators and drying ovens are made to the highest standard for exceptional quality, trusted for their consistency in delivering optimum performance and reliability in the lab.

Labwit's collection of incubators provide precisely controlled environment with wide variety of sizes and types, which literally are suitable for all purposes in a broad range of applications. The general purpose incubators are designed for general lab use and feature direct heating and water jacket models for optimized temperature uniformity across the inner chambers. The direct heating CO₂ incubator has been carefully engineered and proven to provide contamination free, reliable and easy-to-use environment conditions to protect the samples and optimize cell growth. Besides these, Labwit also offers incubators with cooling as well as humidity controlling functions, to extend the functionality of our proud product lines.

Moreover, Labwit drying ovens are available in two types, bottom heating and back heating models. Both types are designed for daily lab or industrial work, from drying sterilization applications to complex controlled heating applications.

ZOCR-1150B

DIRECT HEATING CO₂ Incubator

LABWIT ZOCR Series CO₂ Incubators have been carefully engineered and proven to provide clean, reliable and easy-to-use environment control to protect your samples and optimize cell growth.

In recent times, CO₂ incubators have become more commonplace in the laboratory for their ability to replicate the growth of mammalian cells and tissues for in vitro fertilization, animal research and the many clinical outcomes and fields of medical research. By controlling three essential variables of constant CO₂ level (%), temperature (°C), and relative humidity (RH%), CO₂ incubator can create a balanced and stable environment for cell to grow and thrive. As a result, a controlled pH level (7.1-7.4), controlled CO₂ level (5%), constant temperature (37°C), and high relative humidity (>95%) are well maintained from there.

Touch Screen Panel

Start your complete access and full control from your fingertips

Integrated

Comprehensive information available at your fingertips

User-friendly

Graphic user interface, easy to operate with icons and prompts

Intelligent

Self diagnostic alarm system monitors all functions and parameters and prompts the user in case of errors

Touch Screen Panel

1. Decon

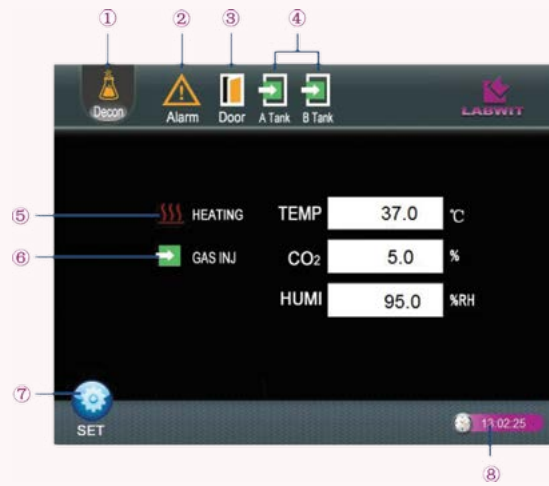

Start/ stop Decon Cycle

2. Alarm Indicator

Blinks when alarm occurs. Alarms (except for sensor failures) can be muted by pressing this icon, and may ring back in 5 minutes if alarm conditions still persist.

3. Door Ajar

Lights when door is opened.

4. CO₂ Tank Indicator

Lights when indicated CO₂ tank supply is in use
A Tank: Primary
B Tank: Secondary

5. Heating Indicator

Lights when heating elements are working

6. Gas Inject Indicator

Lights when CO₂ gas is injected.

7. Enter set menu

8. Clock display

Precise Parameter Controlling System

All-round cares about your cell growth

Direct Heating and Air Jacket System

The chamber design combines direct heating and air jacket elements resulting in efficient thermal isolation of the chamber, rapid temperature recovery and superior protection of samples from ambient temperature fluctuations. Multiple direct heating elements are mounted on each side of the chamber and are controlled independently by the microprocessor to provide outstanding temperature uniformity. One element in the external door and a second within the main unit and adjacent to the perimeter of the glass door, are controlled proportionally to eliminate any of condensation on the glass door.

The unique Air Jacket system creates isolations between insulation and ambient, thereby minimizing the impact of ambient temperature fluctuations on the working chamber, and maintaining more stable temperature control.

World Class Infrared (IR) CO₂ Sensor

LABWIT incorporates a single beam, dual wavelength IR CO₂ sensor, providing the most accurate measurement of CO₂ concentrations available to the market. The superior performance and accuracy of the IR sensor are the most noticeable when applied to situations where temperature and humidity fluctuate rapidly, such as when the door is opened frequently.

IR sensor is located out of the chamber; meaning removal is not required when performing the high temperature decontamination cycle.

IR sensor is drift-free, auto-zero automatically adjusts baseline for optimum accuracy, no need to calibrate by the users.

- Company A's Model: Slow recovery (Typical TC Sensor)
- Company B's Model: Overshoot
- LABWIT ZOCR Model: Fast Recovery, non-overshoot (IR Sensor)

Superior Contamination Controlling Features

Maximizing the safety for where your cells will be thriving

In-Line HEPA Filter

Protects cultures by removing potential contamination sources before CO₂ gas is injected into the chamber. In-line filter should be checked and replaced regularly.

Inner Chamber HEPA Filter

If door openings expose your culture samples to airborne particulates from your room, the inner chamber HEPA filter will dramatically improve air quality (up to 99.97% efficiency in capturing 0.3 micron particles), while maintaining the atmosphere of the still air culture environment avoiding high-speed airflow.

Seamless Chamber & Coved Corners

The entire inner chamber is made of high grade electro polished easy-to-clean stainless steel. All coved corners minimizes the unnecessary chamber surfaces where contaminants can hide.

140°C Decontamination Cycle

The ZOZR Series uses a time-temperature decontamination. The high temperature decontamination cycle uses 140°C dry heating cycles, effective and maintenance free method to ensure the contaminating agents are eradicated. Your incubator can be fully sterilized and ready for a new application after an 10-hour overnight, maintenance free Decon Cycle.

Safety Features

- ▶ Non-volatile memory guarantees data integrity in the event of power interruption.
- ▶ Over-temperature protections unit: alarms when temperature deviation is detected, and heaters are cut off when the temperature is overshoot by 3°C.
- ▶ CO₂ deviation alarm protects the pH value of the culture media.
- ▶ CO₂ supply is interrupted upon door opening to avoid unnecessary gas waste.
- ▶ Audio and visual alarm reminds of low supply of CO₂ gas.
- ▶ Alarms provide optimum protections over all sensor failures.
- ▶ Over-current and leakage protection.
- ▶ Password protection ensures the integrity of all programmable system settings.
- ▶ Lockable outdoor protects biohazard samples from unauthorized access.
- ▶ CO₂ tank backup system(Optional): integrated gas tank switcher allows the connection of two CO₂ gas supplies. When low gas supply in the primary tank is detected, the controller switches automatically to the secondary supply.

Order Information

ZOCR-1150B	ZOCR-1150B, 150L, Premium DH CO ₂ Incubator, IR Sensor, A+5-60, 0-20%
P4001	WiseKonec™ Data Connection Kit
P4002	Right Hinged Door
P4003	Built-in Printer
P4004	Gas Tank Backup Kit
P9033	Perforated Shelf Plate for ZOCR-1150B

Other Features

► Outer Door

Right or Left Hinge Reversible.
Heated for preventing condensations.

Lockable outer door protects your samples against unauthorized access, especially when biologically hazardous material is involved.

► Shelving

SUS304 electro-polished stainless steel.
Anti-tip, easy to dismantle without tools.
Perforated, for improving uniformity.

► Humidity Sensor

Ensures continuous monitoring over the humidity level, resolution of display: 1% Passive humidity read-out. Easy to dismantle for high temperature Decon Cycle.

► Water Pan

Autoclavable stainless steel water pan heated by controlled base heater to manage humidity and assist humidity recovery.

► Stacking Locator

Corners are pressed for easy locating during stacking.

► Access Port

Makes validation easy and provide the user convenience for connecting instrumentation. A rubber stopper is included as standard.

► Glass Inner Door

Tempered glass door allows observations without interference to the inner chamber environment.

WiseKonec™

A wireless data logging, alarming, monitoring system

LABWIT WiseKonec™ uses 2.4GHz ISM band, the most globally accepted unlicensed portion of the RF spectrum, to connect individual LABWIT equipments to PC for remote alarms control and monitoring over the its performance data.

Compared with RS-232 and RS-485 connections, 2.4GHz is a totally cable free connection, provides high speed, stable and interference free data transmission. Up to over hundreds of equipments may be interfaced to a single PC unit.

ZXDP-B2120

DIRECT HEATING Incubators

ZXDP-series direct heating incubators offer an economical incubation method to a variety of micro-organism cultures. As a standard feature, all incubators have a high-tech microprocessor controller that maintains accurate temperature control (PID) of the chamber in the range of ambient +5°C to 65°C. With an accuracy of $\pm 0.1^\circ\text{C}$, a user-friendly sealed control panel allows easy digital setting and fast readout of time and temperature as well as an alarm signal if there is a deviation from set point parameters. The processor of our incubators can store up to 9 programs-18 steps-into a non-volatile memory. Programs can be used for running multiple “ramp and soak” cycles up to 99 times. Of course the incubators can also be used as a constant (one) temperature incubator.

- ▶ P.I.D. microprocessor ensures the precision of temperature control under both fixed value mode and program mode.
- ▶ Fully programmable through the keyboard (9 programs/18 steps).
- ▶ Forced-air circulation provides uniformity of $\pm 0.5^\circ\text{C}@37^\circ\text{C}$.
- ▶ Audible and visible alarm on over temperature.
- ▶ Password protection against unauthorized access to all settings.
- ▶ Non-volatile memory retains preset parameters after an accidental power interruption.
- ▶ Large LCD display for easy parameters setting and fast readout.
- ▶ Inner glass door provides complete visibility to the chamber.
- ▶ Standard 2 grids included

WATER JACKET Incubators

ZXGP-B2160

ZXGP incubators offer an economical incubation method to a variety of micro-organism cultures with high uniformed temperature control. The processor of our incubators can store up to 9 programs-18 steps-into a “non-volatile” memory. Programs can be used for running multiple “ramp and soak” cycles up to 99 times. Of course the incubators can also be used as a constant (one) temperature incubator. With a triple wall construction and large volume of water, ZXGP-series water jacketed incubators provide unsurpassed temperature stability and protection against heat loss. The water jacket technology holds the temperature for extended periods of time, which is critical during power failures. Under test conditions, the temperature initially drops at only 1°C per hour, and just 8.5°C in 10 hours, by contrast, on most direct heating models, which comes with 3.4°C and more than 15°C dropping instead.
